**Designs of Distinction® Plans to Introduce New MDF Plus Tambour Panels at IWF 2024**

**(Chicago, IL):** Designs of Distinction® [DOD] announces plans to introduce new MDF Plus tambour panels at IWF 2024 (Booth #C2562), held at the Georgia World Congress Center in Atlanta, GA from August 6-9, 2024.

DOD's new MDF tambour panels are CNC'd from MDF "Plus" material, which has an increased internal bond making the "plus" grade ideal for intricate machining. The material is a popular choice for residential, retail, and commercial markets as its uniform density profile provides a stable, smooth surface for painting.

MDF Plus is made from 100% recycled or recovered wood and holds FSC and CPA (Composite Panel Association) certifications. It also adheres to ECC (Eco-Certified Composite) standards. Additionally, MDF Plus meets CARB and EPA formaldehyde emissions regulations, helps to reduce or eliminate the carbon footprint, and uses at least 85% wood fibers sourced within 250 miles of the manufacturing facility.

The company states it will begin introducing MDF Plus tambour panels at IWF 2024 with its most popular size for cabinet panels (24"W x 46"L x .25"T) in 3 styles – #100 (bead), #304 (square), and #403 (cove).

MDF tambour Panels are the latest addition to DOD's line of USA-made tambour panels which includes 19 flexible profiles and 8 solid profiles. Species available for solid American hardwood tambour profiles include: Red Oak, Alder (solid only), Cherry (solid only), Hard Maple, White Oak, Walnut, and Paint Grade (Paint Grade Poplar is used for flexible panels while Paint Grade Brown Maple is used for solid panels).
